

Application-specific Advice

In specifying for particular applications you will wish to consider any special factors that will affect your choice of Formica® product.

Washrooms

- For economy, select from large (3660mm x 1830mm x 12mm or 3660mm x 1525mm) sheet size availability.
- Veneer Laminate and Metallic Laminate are not recommended for areas of high humidity or for vanity tops.

Doors

- For economy, a number of items are available in a special door size.
- Veneer Laminate and Metallic Laminate are not recommended for heavy duty doors.

Cladding

- Consider whether any or all panels need to be removable.
- Configure panels for economic use of full sheets; but take care with dimensional stability and directional surface designs.
- Consider cleaning and maintenance expectations.
- Consider panel edge details.
- Consider fixing method.
- Consider fire performance requirements.

Counter Tops

- Consider surface texture.
- Consider type of use: for example, light duty domestic, heavy duty bar top.
- Consider jointing / edge detail.

General Fittings

- Consider any of the above, as relevant.

In all applications, the life cycle of the component will depend on wear and tear and on the methods used for cleaning and maintenance. For specific guidance, contact our Advice Line.
