Digital Service

Sizes

Digital printing

The maximum size of the usable sheet for digital printing is 3000mm x 1170mm. The high pressure laminate sheet is supplied at 3050mm x 1220mm with a white border all round.

Screen printing

We supply screen printed images in a sheet size of 3050mm x 1290mm. Our Digital Design team can advise you on the positioning of your images to enable maximum use of the full sheet, or to allow for subsequent cutting of multiple images.

Material

Designs that are screen or digitally printed may be incorporated into most grades of Formica® high pressure laminates, including standard grade, compact grade (up to 20mm thick) and flame-retardant grade. Additionally, we can create postforming grade laminates with the screen printing process. Laminate can also be bonded to a variety of substrates such as chipboard or MDF.

Further information
